Jenkins / All / New Item
New Item
Enter an item name
pipeline
Select an item type
Pipeline
Build, test, and deploy using pipelines. Supports stages, parallel work, and running on multiple agents.
Freestyle project
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
Multi-configuration project
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
Folder
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
Multibranch Pipeline
Creates a set of Pipeline projects according to detected branches in one SCM repository.
Organization Folder
Creates a set of multibranch project subfolders by scanning for repositories.
Duplicate an existing item
Create a new item by copying the configuration of an existing one.
OK

Jenkins / pipeline / Configure

## Configure

- General
- Triggers
- Pipeline
- Advanced

Script ?

try sample Pipeline...

```
pipeline {
    agent any

    stages {
        stage('Clean Up') {
            steps {
                deleteDir()
            }
        }

        stage('Clone Repo') {
            steps {
                git branch: 'main', url: 'https://github.com/Akshiv20/java-hello-world-with-maven.git'
            }
        }

        stage('Build & Package') {
            steps {
                // mvn clean package builds the jar file while skipping re-testing if already run
                sh 'mvn clean package -DskipTests'
            }
        }

        stage('Test') {
            steps {
                sh 'mvn test'
            }
        }
```

Pipeline
Build, test, and deploy using pipelines. Supports stages, parallel work, and running on multiple agents.
Freestyle project
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
Multi-configuration project
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
Folder
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
Multibranch Pipeline
Creates a set of Pipeline projects according to detected branches in one SCM repository.
Organization Folder
Creates a set of multibranch project subfolders by scanning for repositories.
Duplicate an existing item
Create a new item by copying the configuration of an existing one.

by Jenkinsfile

Script Path ?

Jenkinsfile

### Scan Multibranch Pipeline Triggers

☑ Periodically if not otherwise run ?

Interval ?

1 minute

### Orphaned Item Strategy

Jobs for removed SCM heads (i.e. deleted branches) can be removed immediately or kept based on a desired retention strategy. By default, jobs will be removed as soon as Jenkins determines their associated SCM head no longer exists. As an example, it may be useful to configure a different retention strategy to be able to examine build results of a branch after it has been removed.
